

WEBSITE FEATURE GUIDE

Sree Saanvika

Heritage Weaves – handloom sarees, jewellery & women's wear

sreesaanvika.in

A custom WordPress & WooCommerce shop, built end to end

Theme v1.5.0 · Delivery v1.1.0 · Offers v1.2.0

01 At a glance

A complete shop, not a template with the logo swapped. Everything below was built for this business.

WHAT IS DELIVERED

sreesaanvika.zip

Theme · v1.5.0

The whole shop front — homepage, shop, product pages, cart, checkout, account and twelve content pages.

sreesaanvika-delivery.zip

Plugin · v1.1.0

Delhivery tracking recorded on every order and shown to the customer.

sreesaanvika-offers.zip

Plugin · v1.2.0

Buy 2 Get 1 Free, quantity breaks and Complete the look — no promo codes.

THE SHAPE OF IT

Built on WordPress + WooCommerce

The platform most Indian shops already know, so any developer can pick it up, and nothing is locked to us.

Phone first

Most of your customers shop on a phone. Every page was checked at 390 px — no sideways scrolling anywhere.

Yours to change

Colours, slides, banners, sections, offers, contact details — all of it in the Customizer. No code, no developer.

Elementor optional

One button rebuilds the homepage in Elementor if you would rather drag and drop. Never required.

02 The look

Dark by design. Aubergine and antique gold, so silk photographs glow instead of competing with a white page.

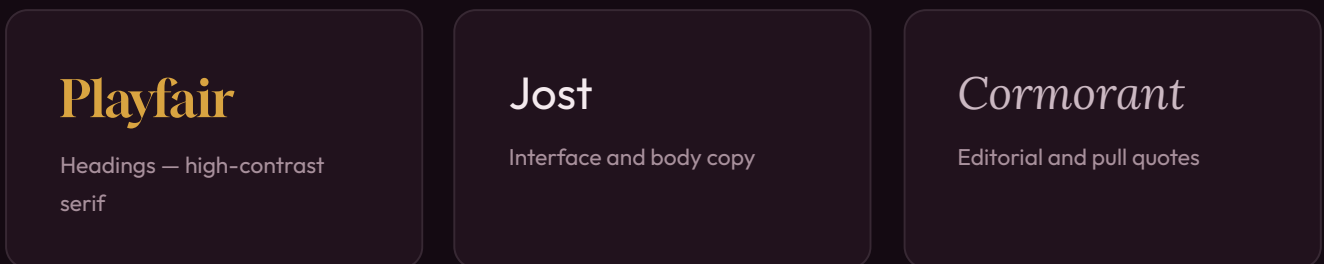

THE PALETTE

Every one is a colour picker in the Customizer, and four curated presets are one click away:

TYPOGRAPHY

LOGO AND SITE ICON

A gold medallion carrying the Sree Saanvika **S**, drawn as vector artwork so it stays sharp from a browser tab to a billboard. Delivered as a full lockup, the medallion alone, and a complete favicon set from 16 px to 512 px including an Apple touch icon.

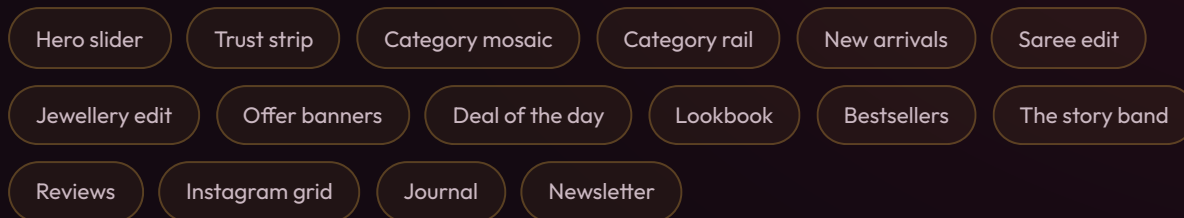

THE LOADING SCREEN

A gold medallion curtain while a page loads, which comes back down when a shopper follows a link — so moving around the shop feels like one piece rather than a series of white flashes.

Switchable at any time. On or off, how long it stays, whether it shows between pages, whether a returning shopper sees it only once per visit. It can never trap anybody — it clears itself even with JavaScript off.

03 The homepage

Sixteen sections, each with its own on/off switch and its own place in the order.

THE HERO

Three slides, each with its own eyebrow, headline, body, button and image. Auto-advance optional.

CATEGORIES, YOUR CHOICE

Pick any number by hand, or let the theme take the busiest. The mosaic packs neatly whether you show four or fourteen.

PRODUCT SECTIONS

Show as many products as you like, with a *Load more* button that fetches the next set without a page reload.

OFFER BANNERS

Promo tiles and a deal-of-the-day band with its own countdown, all set from the Customizer.

TWO WAYS TO EDIT IT

Keep the theme homepage Everything lives in the Customizer — hero slides, banners, which sections show and in what order. Nothing to install, and it stays fast.

Rebuild it in Elementor One button creates a real Elementor page holding the same sections, seeded with your current settings, so you can drag, drop and restyle visually.

04 Shop & product pages

Where a saree has to be sold on a photograph. The gallery does most of the work.

THE GALLERY

- **Thumbnail rail, hover-to-zoom and a full-screen lightbox** with keyboard and swipe support.
- **Per-colour photo sets.** A saree shot in green and in red is one product with two sets of photos. Pick a colour and the whole gallery switches — stage image, thumbnails, zoom layer and lightbox.
- **Nothing attached twice.** Each colour's photos are read straight from that colour's variation, so the images you already upload are the ones the shop uses.
- **Image swatches.** A colour with photos shows one instead of a flat circle — far easier to choose between two similar greens.

CHOOSING AND BUYING

Swatches and chips

Colour swatches and size chips built from the product's own attributes — no separate list to maintain.

An honest quantity stepper

Stops at the real stock and says why, instead of silently doing nothing.

A price that follows

Three at ₹1,200 reads ₹3,600, old price struck through, discount percentage beside it. Changes with the colour too.

Buy it now

Straight to checkout in one tap, beside the ordinary Add to bag.

BROWSING

Filter sidebar with categories, a dual-handle price slider, colour swatches, fabric, occasion and rating. Grid or list view, sorting, quick view straight from the grid, and product cards with a hover image, badges, a stock meter and live colour swatches that repaint the card.

05 Offers & promotions

All of it without a promo code. Nothing for a shopper to type, and nothing for them to miss.

0%

BUY 2 GET 1 FREE

Add any 3 sarees — the cheapest is on us

Pick the products an offer covers, by hand or by whole category, with an exclusion list. When enough are in the cart, **the cheapest ones come off the total on their own.**

Three sarees at ₹3,999, ₹2,999 and ₹1,200 → **the ₹1,200 one is free.** Six sarees → two free. Buy 3 get 1 works the same way, and so does 50% off the cheapest instead of free.

QUANTITY BREAKS

The other shape of offer — **2 for 10% off, 3 for 15%, 5 for 20%.** Counted per product, so it catches the shopper buying a pair of the *same* saree, which the offer above deliberately does not. The breaks show as chips on the product page, and a shopper always gets the best one their quantity earns.

COMPLETE THE LOOK

On **any product**, pick the pieces that go with it — the jhumkas for a saree, the bangles, a matching blouse. Under the product they read as **this piece + match + match**, each with a tick box, a running total, and one button that puts the whole look in the bag.

- Unticking a piece re-totals instantly; a piece already in the bag says so rather than going in twice.
- Give the pairing a percentage and it becomes a real offer — the matching pieces are discounted whenever the product they were chosen for is in the same cart.
- Tick *show this both ways* and the saree turns up beside the jewellery too, without picking it again from that side.

URGENCY, AND A NUDGE

Countdown

Give an offer an end time and a live countdown appears on every product it covers and at the top of the cart.

Free-shipping meter

Add ₹340 more for free shipping, with a bar that fills and turns green. In the bag panel, the cart and above checkout.

05 How the offers hold together

The part that matters when real money is involved.

They never stack by accident

An offer and a pairing never both cut the same line, and no line can go below zero. The first to claim a line keeps it.

Worked out on the server

Not in the browser. It holds with JavaScript off, survives a refresh, and cannot be applied twice by a recalculation.

Written onto the order

The offer's name is recorded on the order line, so months later it is clear why a saree went out at nothing.

Visible, not hidden

The free line is struck through and marked in the cart, so the shopper knows what they are getting before they pay.

RUNNING AS MANY AS YOU LIKE

Offers are separate records, so sarees can have one and jewellery another — counted separately, so two sarees and two bangles is not three of anything. Add a third for a festival week and switch it off afterwards.

WHAT THE SHOPPER IS TOLD, AS THEY GO

Two sarees in the bag	"Add 1 more to get one free"	Third added	"1 item free — saving ₹1,200"
-----------------------	------------------------------	-------------	-------------------------------

06 Cart, checkout & account

The last few screens, where most shops lose the sale.

- **A cart built for this theme** — not WooCommerce's default blocks — with the free-shipping meter, a savings line, and a clear mark on every discounted line.
- **A three-step checkout** with styled fields and a progress indicator, so a customer always knows how far along they are.
- **A slide-out bag** from any page, with the free-shipping meter inside it.
- **Sign in and sign up** on one designed page, not WordPress's grey login form.
- **My Account** — orders, addresses, downloads and details, all in the theme's look, with delivery tracking built into each order.
- **A switch on the welcome screen** to move between the theme's cart and WooCommerce's block version, whenever you want.

WISHLIST AND COMPARE

Both included and both styled — a wishlist a shopper can build across visits, and a side-by-side compare table for choosing between two sarees on fabric, work, price and rating.

TRACK YOUR ORDER

A page of its own, where a customer enters an order number and the email or phone they used, and sees exactly where the parcel is — without needing an account.

07 Delivery & tracking

Built for one courier — Delhivery — and for a shop that already sees every order in the courier's app.

Order placed	Packed	Dispatched	In transit	Out for delivery	Delivered
--------------	--------	------------	------------	------------------	-----------

WHAT THE CUSTOMER SEES

That progress line on the thank-you page, in My Account, and under the Track Your Order form — with the tracking number, the courier, the expected date, and every scan with its location and time. They can track without logging in: order number plus the email or phone from the order.

WHAT THE SHOP SEES

A **Delivery** panel on every order — status, consignment number, courier, expected date and the full history. A Delivery column on the orders list, and bulk actions to mark a batch dispatched or delivered.

THREE WAYS THE STATUS GETS IN

1. Delhivery answers for itself	Paste a Delhivery API token, pick an interval, and the shop asks them where every parcel still in flight is — moving orders along with nobody touching it. A <i>Check now</i> button too.
2. A push from your delivery app	A secure address your app can post each scan to, so the website says <i>Out for delivery</i> the moment the app does.
3. The courier's CSV manifest	Upload the two-column file Delhivery hands back after a pickup and every tracking number lands at once.

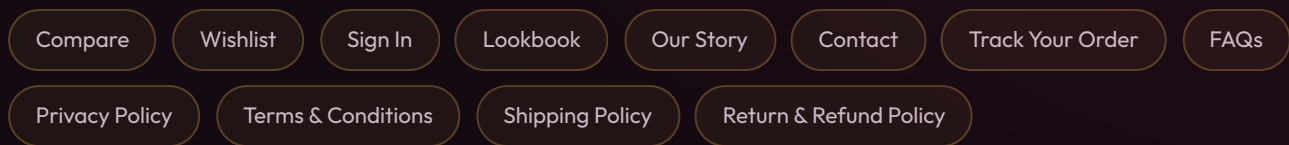

TOLD WITHOUT BEING ASKED

Optional emails to the customer on **dispatch** — with the tracking link — and on **delivery**, in the shop's own styling. Optionally mark the WooCommerce order Completed the moment the parcel lands.

Delhivery's own wording is mapped onto the six stages above. Anything unfamiliar is recorded as a note rather than guessed at, so the customer is never told something that is not true.

08 Pages & policies

One button creates all twelve and builds a menu from your product categories. It never overwrites anything you already have.

THE LEGAL PAGES ARE WRITTEN, NOT BLANK

All four arrive with a full draft written for an Indian e-commerce business — GST, cash on delivery, the **Digital Personal Data Protection Act 2023**, the **Consumer Protection (E-Commerce) Rules 2020**, and a named grievance officer as those rules require.

Typed once, used everywhere.

Your business name, GSTIN, address, email, phone, return window, shipping rates and cash-on-delivery limit are entered once in the Customizer and flow into every document — and into the product data Google reads.

Each policy page gets a contents rail down the side and a highlights strip at the top, so a customer can find the answer to one question without reading the whole document.

These are a well-researched starting point written for a business of your kind — not a substitute for your own legal advice. Read them through and adjust anything that does not match how you actually trade.

OUR STORY, CONTACT AND FAQs

An editorial About page with the numbers, the weaving clusters you buy from, what you stand for and how a piece reaches the customer. A Contact page with the address, phone, email and hours. An FAQ page ready to fill in.

09 Found on Google

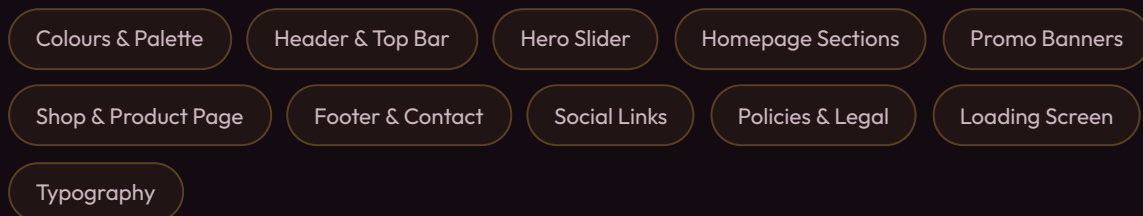

The parts of search that a shop can actually control, done properly.

- **Titles and descriptions** with sensible defaults on every page, product and category.
- **Open Graph and Twitter cards**, so a link shared on WhatsApp or Instagram shows the product photo rather than a blank box.
- **Structured data** for products — price, availability, rating, brand, GTIN — plus breadcrumbs, the organisation and the site search. This is the mark-up Google uses to show a price and stars directly in the results.
- **Cart, checkout, account and search kept out** of Google's index and out of the sitemap, where they only ever waste crawl budget.
- **Defers to your SEO plugin.** Install Yoast, Rank Math or SEO Framework and the theme steps back, so nothing is ever printed twice.

10 Running the shop

Everything in one place, in plain words.

CUSTOMIZER → SREE SAANVIKA OPTIONS

APPEARANCE → SREE SAANVIKA

One-click setup, a cart/checkout style switch, the Elementor homepage builder, a **Repair page templates** tool for when a page loses its design, and shortcuts into the offers and delivery screens.

ON THE PRODUCT EDITOR

Colour galleries for per-colour photo sets, and **Complete the look** for the matching pieces — both on the product page itself, where you are already working.

11 Under the bonnet

For whoever hosts and maintains the site.

Requires	WordPress 6.0+, PHP 7.4+, WooCommerce 7.0+
Order storage	Works with WooCommerce High-Performance Order Storage
Page builder	Elementor optional, never required
Translation	Every string translatable; right-to-left stylesheet included
Accessibility	Keyboard navigation, screen-reader labels, reduced-motion support
Without JavaScript	Prices, discounts and the loading screen all still behave
Child theme	Supported and documented — your changes survive updates
Icons	63 inline SVG icons — no icon font to download
WooCommerce templates	16 overridden, each kept close to the original so upgrades stay easy
